Thanks, guys, this is very helpful. I agree that it's hard to say if any of the Class I wells are actually available to the shore-based facilities and that it'd be great to have Thor's input to resolve this question. Is he a one-man shop or does he have anyone backing him up? If so, who?

Ahmar,

I consulted with Tim and he came up with 5 Class I wells in the Cook Inlet area but without Thor or someone from his program's input, we aren't sure that these are the universe.

The 2 shore based wells:
 West MacArthur Unit
 Beluga River Unit

Both of these are on the westside where 2 of the shore-based facilities, Trading Bay and Granite Point, are located but I am not sure of the distance or whether piping exists that could send produced water to the wells.

There are also wells on 3 platforms in the Inlet: Osprey, Dolly Varden and Tyonek.

If you want to have a quick chat, we'd be available during your afternoon up until 4:30 ET tomorrow. Let me know.

Cindi

Hi Cindi,

I hope you're well. I'm still plugging away on the Cook Inlet exemption question and wanted to pick your brain about disposal options for the three shore-based production facilities in the Inlet: Granite Point, Trading Bay, and East Forelands. Do you know if injection wells are available to dispose of their produced waters? I tried to reach out to Thor, but he isn't in the office (and his automated reply doesn't tell me when he'll be back in). Therefore, I thought I might bug you :-). Can you chat tomorrow (Thursday, February 19th) or Friday, the 20th? If so, please let me know what time works for you and at what number I should call you. In case it helps you, I'll be in the office the next two days until 5 p.m. EST.

Thanks!

Ahmar Siddiqui
